                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          92:
                                                                                                                                                      pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Publication No. US20020170093A1

GENERAL INFORMATION:

APPLICANT: Monsanto Technology LLC

APPLICANT: He, Steve 5.

APPLICANT: Dotson, Stanton B.

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ASSOCIATED WITH PLANT CELL PROLIFERATION

TITLE OF INVENTION: GROWTH AND USES THEREOF

FILE REFERENCE: 38-21(51837)8

CURRENT APPLICATION NUMBER: US/10/024,632

CURRENT FILING DATE: 2001-12-19

PRIOR APPLICATION NUMBER: US 60/257,896

PRIOR RILING DATE: 2000-12-21

NUMBER OF SEQ ID NOS: 33

XhoI; Library Gm_r1021 is a sequence-driven, reracked set
of the original library Gm_r1004 which was prepared from
root cDNA. The mRNA was isolated from entire roots of 8
day old 'Williams' seedlings which were propagated on
paper towels with distilled water. Stratagene's cDNA
Synthesis Kit (catalog #200401) was used to synthesize
the cDNA. The Gm_r1004 library was constructed by Dr.
Paul Keim & Virginia H. Coryell, Department of Biology,
Box5640, Northern Arizona University, Flagstaff, AZ

If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR, www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize CDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB: www.zmdb.iastate.edu.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hainey.C.F., Dolan,M., Miao,G.H., Vogel,J.M., Whitsitt,M.S., Arthur,L.W., Hanafey,M., Morgante,M. and Tingey,S.V. SfiI; CABUT is a cNNA library of Vitis vinifera cv.
'Cabernet Sauvignon' Clone & dissected buds. Samples were
collected May 13, 2002 from pre-bloom plants (10-11 days
before bloom), pre-veraison. Sampled vines were located at
the University of Callifornia, Davis, Experimental
Vineyard. cDNAs were made by oligo-dT priming and
directionally cloned: S'and 3' adaptors were used in
cloning as follows:
5'-ANGCAGTGGTATCAACGCAGAGTGGCCATTACGGCCGGG-3' and
5'-ANGCAGTGGTATCAACGCCAGAGTGGGCCACATG-dT(30)NN-3. Library was
constructed using the Clontech Creator SMART kit and
size-selected to contain the 0.5-3 kb size fraction."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Solanum tuberosum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CK267021.1 GI:39823999
                four separate sets of plants. Set 1 involved saturation of the soil with 150 mm NaCl and tissues were harvested at following application of the salt stress (leaves: 2hr, 6hr, 12hr, 1d, 2d, and 4d; roots:2hr, 6hr, 12hr, and 2d). Set 2 were grown under the standard conditions and then were water stressed by withdrawal of further watering applications. Drought stressed plants were harvested after cessation of watering (leaves: 3d, 5d, and 7d; roots:3d and 5d). Set 3 were grown under the standard conditions and then were cold stressed by placement at 4 C. Cold stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and roots were harvested at 2 hr, 6 hr, 12 hr, 1 d, 2d. Set 4 were grown under the standard conditions and then were heat stressed by placement at 35 C. Heat stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, 2d and 4d and heat-stressed roots were harvested at 35 C. Heat 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 6 hr, 12 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d, 15 hr, 1 d,

A backbone of the vector is basically from pBluescript II (KS),
that was in vivo excised from a 1-FLC phage vector (Carninci et al.
2001). 5' end of the cDNA that was digested with KhoI was ligated
to Sall site of the vector and the 3' end including polyA tail was
ligated to BamHI site of the

cDNA library was constructed from mRNA is to 9 months)
cultured on MSD 20. The library was prepared using the
rife Technologies psuperscript cDNA library construction
kit. Complementary DNA was synthesized from mRNA using a
poly (dT) sequence with a NotI restrictions site. SalI
linkers adapters were ligated to the blunt-ended cDNA
fragments followed by NotI digestion. The cDNA fragments
were directionally cloned into the NotI-SalI restriction
site of the pspCRTI vector. The ligated cDNA fragments
were transformed into E.coli ElectroMax DH10B host cells.
This library was constructed in the laboratory of Dr. Lila
Vodkin by Anu Khanna at the University of Illinois at
                                                                                                                                                                                                                                                                                                                                                                                                             1. .590

/clone = Typector: pBluescript II SX+; Site 1: EcoNI; Site 2: XhoI; This cDNA library was constructed—from mRNA isolated from cotyledons of 3 - and 7-day-old williams seedlings which were propagated on paper towels with distilled water. The cotyledons were flash-frozen in liquid nitrogen, then lyophilized for 72 hours. Unequal amounts of mRNA was used for cDNA synthesis. Stratagene's cDNA Synthesix Kit (catalog number 200401) was used to synthesize the cDNA. First- stranded synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's cDNA synthesize trand synthesis primer was used. An anchor nucleotide (V=A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGACATGACTGCAGG(T)] 18] to anchor the primer at the 5' end of the poly(A) tract. After second- strand synthesis, the cDNA ends were filled in with cloned pen LDNA, ligated to EcoRI adapters and subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI, all XhoI sites in the cDNA constructs were size-fractionated with a 500 bp cutoff, using GibcoBRI Life Tecknologies' cDNA size Fractionation column. The column eluent was then ligated into Stratagene's pBluescript (tm) II XR Predigested vector (pBluescript IS(+)) that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). 97% of the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=30). This library was constructed by Dr. Paul Keim and Dr. Virginia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /organism="Glycine max"
